

HS Science RFI Q & A –

- Regarding "provide a full suite of curricular resources." Can we submit materials for only specific courses or does the submission need to cover the entire scope?
We would prefer a full suite of curricular resources; however we realize that all might not be able to provide this
- Will any Advanced Placement courses be reviewed?
We are not reviewing any AP courses at this time, as we still have a few years left on those contracts.
- If selected, when will the first material be placed? And, how long are you looking to utilize adopted materials?
The New standard implementation will begin the 24-25 school year, and so we would need the first materials in classrooms before then. We have not determined our roll-out plan yet. We have not determined an end date but are looking to make our decision a long-term one.
- Will material samples be required (digital and/or print)? And, if so, how should we address those samples?
Samples will be address later in the process
- Can you provide us with the NextGen TIME Rubric that is mentioned in Objective 1 – Criteria 1 on page 2 of the RFI?
[NextGen Time Rubric](#)
You can share the Ed Reports review if you received at least Partially Meets Expectations in Alignment (Gateways 1 and 2), or if you have not been evaluated by Ed Reports can review using NextGen Time Rubric.
- Regarding "provide a full suite of curricular resources." Can we submit materials for only specific courses or does the submission need to cover the entire scope?
We would prefer a full suite of curricular resources; however we realize that all might not be able to provide this.
- Will any Advanced Placement courses be reviewed?
We are not reviewing any AP courses at this time, as we still have a few years left on those contracts.
- If selected, when will the first material be placed? And, how long are you looking to utilize adopted materials?
The New standard implementation will begin the 24-25 school year, and so we would need the first materials in classrooms before then. We have not determined our roll-out plan yet. We have not determined an end date but are looking to make our decision a long-term one.

- Can you provide enrollment counts (student & instructor) per course?
These are estimates-
Biology: 127 teachers,
Chemistry: 70 teachers,
Earth & Environmental: 100 teachers,
Physics: 18 teachers, 959 students
- Is CMS interested in receiving responses for supplemental science materials as part of this RFI, or only core curriculum?
We are currently looking for corer curriculum
